CPLUS SOFT

OUR PROJECTS

Our profound knowledge and extensive experience in web and mobile app development enables us to deliver high quality solutions for a wide range of industries and domains, including automotive, advertising, motion picture & video, consulting, retail, legal and more.

PROJECT
Slyder 49 Catamaran
https://slyder-catamarans.com/en/slyder-49

IoT Based Luxury Yacht Control & Monitor Software

IDEA:
The client needs a real-time system that will have to track and view & control the records of Slyder 49 Catamaran in real-time such as engine monitor and control, sail monitor and control and many more. They need automation software that will efficiently show & control the stats of Slyder 49 in real time so that every movement and related data should be tracked. This project was unique in its category and complex one due to real-time Big Data involvement which will be processed in neno seconds with zero error rate.

So the client reached ‘Cplus Soft Pvt. Limited’ for the development of an real time IOT based Mobile application that can control fuel, air movement, and engine performance getting all these data from sensors and machines such as engine, rudders etc using “MQTT Server on local” and implementing it on an Mobile Application platform. Cplus Soft had took this project as challenge due to its unique concept in market. It was one of the sensitive projects in Cplus Soft working history due to Human Life Risk involvement in this project.

WHAT WE DELIVERED:
We delivered a fully functional Mobile Application with a user-friendly design and optimized data processing in a real-time by implementing that data from MQTT Server.
We have given a fully functional Mobile application with following features:

- Harbour / Anchor / Steam / STBY / Nav Control System
- Air Con / Power Control System
- Events Management System
- Real Time Notification System
- Generator / Power / Batteries Control System
- Shore Power Control System
- Real Time Stats i.e. Fresh Water, Black Water, Diesel
- Solar Panel Managent System along with DC Current Control
- Washing Machine / Water Pump / Freezer / Lights / Toilet / Outlets Control
- Furler / Anchor TV / HiFi / Oven / Winches Control System
- Engine Control & Stats along with rpm, speed, DTW, TTW, ETA, Range and much more.
- Sailing Control & Stats along with POS, GPS, SOG, Depth, AWS, Hydro gen, Windlass etc
- Weather Control & Stats along with WINDSPEED, timescale, Air Temp, Humidity, Air Pressure etc
- Night Vision, Language change, Server Management, Color Management
- Much More.

PROJECT
Royal Donuts
https://www.royal-donuts.fr/

Automated Restaurant Franchise & Chain Control System

IDEA:
The client suffered a lot from his existing system in design, performance, and response the system seems almost exhausted when someone uses it. These all problems need to be tailored with the use of cutting-edge technology and experience. As this was a multi-module and multi-platform system that should be handled with professionalism and a sound understanding of business logic. They needed a fully responsive and efficient system having a modern practice design that should be able to work on all platforms.

So they contacted ‘Cplus Soft Pvt. Limited for the development of a cross-platform “Royal Donuts System” that is able to manage all of their eCommerce and food chain operations, control, and management in a responsive and efficient way. We accepted this problem as a challenge for us because this brand has a large franchise and restaurant chain system presence in Germany with recognition as a top-ranked brand. We have to manage their system for France. We build multiple modules for the “Royal Donuts System” that can run on multiple platforms to meet the real business challenge.

WHAT WE DELIVERED:
We delivered a cross-platform system that is able to work on all platforms and devices in a responsive user-friendly way. We divided the system into different modules for efficient performance and response. Following is the system that we delivered that can be run on multiple platforms.

- Product control and management
- Categories control and management
- Customer control and management
- Order tracking and management
- Efficient stores management
- Payment gateways management and control
- Roles management and allocation
- Customized site settings
- Email management
- Product search and selection
- Lead management
- Product customization
- Categories search and selection
- Product order and control
- Search and select near the store
- Order from near store
- Pay through payment gateways
- View Order Details
- User Dashboard control and management

Integrated Learning & Education Management System For Chain Schools

IDEA:
The client needs a smart automated system able to perform on all platforms that manage all the education activities in an efficient manner. As they have to manage all the educational activities for their chain school network which has an international presence. He wanted the LMS System should be able to manage all the roles and their specific functionalities in a smart, user-friendly, and responsive way. The LMS System should be able to manage examinations, quizzes, assignments, literature, franchise management, and financial activities in one automation system. As per user requirements, this system covers each activity of the educational institute and manages all the functionalities of a chain-based school system.

Based on our remarkable journey in Software Development they contacted Cplus Soft Pvt. Limited to developing this integrated education automation system for their school system. As per clients' expectations, we implement each and every business logic in an efficient way through a quality software product.

WHAT WE DELIVERED:
We delivered a complete integrated system that is able to meet all the client's business logic in quite an efficient way. The intended system consists of the following modules-based applications that can be run on all platforms.

- View and manages dashboard stats
- Franchise request control and management
- Payment control and management
- Student control and management
- Teacher control and management
- Parents' control and management
- Groups creation and management
- Announcements creation and management
- Countries' control and management
- Categories control and management
- Courses creation and management
- Quizzes control and management
- Lessons creation and management
- Assignments creation and control
- Question Books Management
- End-to-end messaging management

Integrated Enterprise Resource Planning System

IDEA:
The clients need an ERP system for their business to plan and manage their daily activities such as supply chain, manufacturing, services, financials, and other processes. They need an ERP system that will have to manage all the functionalities and roles in an efficient way. This ERP system have also a management part that deals with the control of stakeholder products, sales, and all the other functionalities for their 'Automobile Enterprise'.As this was a data-driven project that involves big data for management so efficiency and response were also the main concern to be handled. So data surveillance and optimization is also a big challenge that needs to be resolved.

So they contacted 'Cplus Soft Pvt. Limited for the development of an Enterprise Resource Planning system that will be able to manage all of their processes in an effective way. By considering all the user requirements and business problems as a challenge and opportunity for us to implement the business logic of an Enterprise level organization.

WHAT WE DELIVERED:
We delivered a complete Enterprise Resource Planning system that manages all the processes of the client in an effective and efficient way. Following is the system that is composed of multiple modules that were delivered.

- View dashboard records and stats
- Generate and view reports
- Product control and management
- Archived Product control and management
- Retailer control and management
- Form management and creation
- Chassis Number control and management
- Control and view retailer records and stats
- Generate and view reports
- Search and perform operations on products
- Purchase List control and management
- Sales control and management
- Suppliers' control and management
- Accounting control and management
- Human Resource Management
- User control and management

PROJECT
Hotel Management System
https://www.djerbaplaza.com/fr/

Smart Automated System For Efficient Hotel Management

IDEA:
Clients have already built systems for their hotel business but it was not a complete software platform that can compete with competitors in the market. If your system lack performance and design then it means you do have not any presence in the market.

So considering all these issues in mind client contacted Cplus Soft Pvt. Limited the development of online platforms that are capable enough to meet the stakeholder's requirements and should have the capability to compete with competitors. We take this project as a challenge although we have a lot of experience in the development of such vast enterprise-level projects. We accepted this a prove as an excellent experience for us from the client's point of view because this system not only includes every business logic but also has the capability to compete with the industry from a performance and design perspective.

WHAT WE DELIVERED:
The deliverable of this project includes a complete smart automated platform that meets all the business logic of stakeholders.

- Control and manage bookings
- Room allocation and management
- Set and adjust room rates
- Create and manage packages
- Track and control user activities
- Create and manage services
- Add and manage facilities
- Manage and control customers
- Add and manage discounts
- Apply site customized setting
- Allocate and manage roles for better access
- Apply and control payment methods
- View and manage dashboard stats
- Search and view required data
- Make and control efficient booking
- Ask the queries admin for a better understanding

Online Videotelephony
Classroom Web-based System

IDEA:
The client needs a web-based online classroom platform for their education institute that allows effective coordination between multiple stakeholders. The intended system enables videotelephony classrooms for their users for better and more effective learning coordination from the comfort of their homes.

Based on our remarkable journey in software development client contacted ‘Cplus Soft Pvt. Limited for the development of this online web-based platform.
We accepted this project development proposal and starts working on it considering this project a challenge for us. We developed each functionality and make this project a success story for us.

WHAT WE DELIVERED:
We delivered a cross-platform system that is able to work on all platforms and devices in a responsive user-friendly way. We divided the system into different modules for efficient performance and response. Following is the system that we delivered that can be run on multiple platforms.

- Classrooms management and control
- User management and control
- Class record maintenance and control
- Meeting management and control
- Chat support for efficient coordination
- Efficient classroom management and control
- User dashboard management and control
- Make videotelephony with teachers for class
- Chat and make communication with peers and teacher
- Dashboard management
- Invitation links creation and sharing for an online class
- Make online video calls with students
- Add and remove students for better coordination
- User management and control
- Chat support service for students regarding their queries

PROJECT
B2B Gift App
https://b2b.cplusoft.top/

Secure Business-to-Business Gift-sharing Application

IDEA:
Client needs a ‘Gift Platform on which they can share gifts between businesses. This is a business-to-business platform whose main motive was to communicate between businesses. As this is the sole business gift-sharing platform that not only shares gifts but enables communication between these businesses.
These platforms include sharing of gifts and payments between businesses so it requires secure and end-to-end encryption between businesses for efficient coordination between them.

Based on our remarkable journey the client contacted Cplus Soft Pvt. Limited the development of this smart system that can run on target platforms.
We consider all the business requirements and developed a secure automated system that performs all the user functionalities in an efficient and effective way.

WHAT WE DELIVERED:
The deliverable of this project includes a complete smart automated platform that meets all the business logic of stakeholders.

- Manage and control dashboard stats
- Assign and manage roles
- Add and manage tickets
- Manage and upload promotional videos
- Reply to the queries from customers for better interaction
- User management and control
- Create and control community
- Manage and control withdrawal requests
- Manage secure transactions of users
- Manage and control user invoices
- View and manage dashboard stats
- Gift board management and control
- Blessing room management and coordination
- Secure wallet management and control
- Pure giving management
- Tickets control and management

Smart Examination Platform For The Regulatory Body

IDEA:
The client was the UAE Government regulatory authority that needs an online automated system for the validation of professional engineers through a online examination platform. This was a multi-role platform on which engineers need to pass the test for proving their professional eligibility. They needed a complete Smart Automated solution that can pass engineer through a process of registration and validation, system gave him a facility to select slot and test he want to give and can monitor him through smart In-vigilation tools integrated in system so that Goverment Authority can approve certificate to that engineer to work in UAE.

Based on our remarkable journey client contacted ‘Cplus Soft Pvt. Limited for the development of this system that includes all the functionalities as per stakeholders' requirements. We developed a testing platform for professional engineers to validate their eligibility and include all the requirements as per stakeholders' demands.

WHAT WE DELIVERED:
We delivered a completely working online automated system that is able to meet all the client's requirements with quality and a better user experience. Following are the modules that we delivered to the client.

- Create exams for engineers
- Set time and other parameters for exams
- Manage and control dashboard stats
- Make efficient user management and control
- Set and manage payment details
- Manage and share results with candidates
- Make a report of all the relevant candidates
- Email management for better coordination with user
- Perform login and registration process
- View and manage dashboard stats for better coordination
- Pay the fee for your desired test
- Apply for the test as per your available time
- View application status
- Perform relevant test
- Check your results
- View your validation status

Influencer App
https://influencer-app.cplusoft.top/

Influencers Marketing & Branding Promotion App

IDEA:
The client needs a website that will manage all the records of influencers, brands, coupons, and the association between them. The intended system of a client has to track which influencer is associated with which brand and also the records of coupons and their association with the brand and a particular influencer.

So the client contacted “Cplusoft” for the development of a website system that will manage all these business problems in an efficient and effective manner.
We do proper domain research on this project and consider this a challenge for us because it includes big data of influencers, brands and coupons, and records of their association. As we have to manage big data so we consider all of these trade-offs and delivered a quality product.

WHAT WE DELIVERED:
We delivered a fully functional web-based automated system that meets all the business requirements of stakeholders. Our system performs all the required functionalities like managing all the records of brands, coupons, and influencers and the association between them. Following are the functionalities which an admin can perform on this website.

- View and manage dashboard stats
- Brand control and management
- Coupon control and management
- Efficient influencer management
- Effective association control and management
- Image management and uploading
- Payment record management
- Make data backup for disaster recovery
- Upload big data on the website
- Import CSV data
- Export CSV data
- Apply filters for getting intended results

PROJECT
Social Media Marketing Bot

Artificial Intelligence-Based Marketing Bot For Facebook & Instagram

IDEA:

This is an artificial intelligence-based system that is responsible for social media marketing on Facebook. The system first collects all the data depending on your area of interest and then makes your marketing posts for your business and then shares these posts in that groups.
This system overcomes the efforts for marketing and gives pure organic results and provides an easy solution for businesses.

We developed this solution for businesses so that they meet their marketing needs and provide them with an organic market audience.We developed AI algorithms and bots that not only get hidden by others facebooks bots but work like a human being.

WHAT WE DELIVERED:

We developed complete marketing solutions for businesses in order to get a real organic audience for their businesses. Following are the functionalities that our system performs.

- Log in through your Facebook account
- Collect the relevant marketing group information
- Likes and join these Facebook marketing groups
- Create a post by getting all the relevant data
- Share posts on the liked group
- Share posts at a specific time
- Like others posts
- Log in and like relevant interest groups
- Log in through your Instagram account
- Add post to your Instagram account
- Like Instagram posts on a routine basis for multiple accounts
- Comment on others' accounts for better user interaction
- Message to other Instagram users for efficient interaction
- Follow new users and maintain records of them.
- Unfollow the account who don't follow your business account
- Collect the relevant marketing group information

IDEA:
The client needs an eCommerce website that manages all the trading of ‘Tiles and marble’ products through an online automated system. They need a software platform that will manage all its eCommerce functionalities with a user-friendly and modern design with a good user experience.
This system also includes an admin panel which will allow the user to easily manage and control all the functionalities of stakeholders in an efficient way. They also need payment gateway integration which allows the user to pay all of its payment securely from the comfort of their home.

Based on our remarkable work experience client contacted Cplus Soft Pvt. Limited for the development of a website that will manage all these business logic in an effective way.

WHAT WE DELIVERED:
We delivered a fully functional eCommerce website that has to manage all the trading of tiling and marble products in an efficient and user-friendly way. Following are the modules which we delivered on this automated system

- Dashboard control and management
- Create and manage reports
- Order control and management
- Categories control and management
- Efficient product control and management
- Product warehouse control and management
- Order management and control
- Effective eCommerce functionalities management
- Customer list management
- Website setting control and management
- Blogs control and management
- Subscription management
- Import Data CSV
- Export Data CSV
- Search and manage products
- Search the required product by category
